

Group Project Requirements

Fall 2026

Requirements

Each group will choose a business topic/context and create a relational DBMS for the business. The project presentation/report will include details of:

1. Context introduction – requirement analysis [course outline – week3~4 lecture]
2. Conceptual design – ER/EER models [course outline – week3~4 lecture]
3. Logical design – relational models [course outline – week5-6 lecture]
4. DB implementation & other issues [course outline – week7-12 lecture]
5. Thoughts/discussions on database building, data usage and possible analysis

Students may also refer to the *Chapter 9: Database Design* of the textbook (**Database Systems: Design, Implementation, and Management**, by Steven Morris, Peter Rob, Carlos Coronel, the 13th Edition; [excluding](#) the content relevant to database physical design and/or maintenance) for procedures and details in completing the project.

Students are encouraged to be creative, take risks and to touch some novel/complex topics/contexts.

Timeline

- Group assignment – to be decided at week 3 [Size: 5~6 persons/group]
- Project topic – to be decided by week 5
- Presentation – to be delivered during week 13
- Group report – to be submitted by the Friday of week 13

Assessment Items

- In total: 25 points
 - Presentation: 10 points (including presentation and QA)
 - Group report: 15 points

Audience

Students not belonging to the presentation group, may ask questions when the presentation is over.

Marking Scheme

There will be multiple markers for the output of the group projects, instructors and teaching assistant(s).

To ensure a fair assessment of the group work, each group member could indicate their view of every individual's contribution to the project. The exact rule is shown in the File: *Group Project Contribution Form*.

In sum, the final score for each student is calculated based on the idea: *Avg (markers) * Avg (teamwork parameters from teammates)*

The detailed marking schemes are listed below.

A. Scheme for presentation

Criteria	Standard & Marking Examples		Score
Topic/problem	The novelty of the topic/problem and the execution of the database development		Total: 4
	A	Raise a novel context, and provide appropriate and complete building process to the business	4
	B	Provide a complete building process to a meaningful topic	3
	C	Simply implement some ideas with a standard context	2
Clarity & organization	The quality of being able to clearly present the development process and discussions		Total: 4
	A	Well-organized and successfully present with details, logic, precision and clarity	4
	C	Complete the presentation in an organized way	2
	F	Cannot/barely deliver the idea of the work	0
Presentation	Skills at presentation and ability to address audience's questions		Total: 2
Sum			Total: 10

B. Scheme for group report

Criteria	Standard & Marking Examples		Score
Clarity & organization	The quality of being able to clearly present the development process and discussions		Total: 4
	A	Well-organized and successfully present with details, logic, precision and clarity	4
	C	Complete the presentation with logic	2
	F	Cannot/barely deliver the idea of the project	0
In depth analysis	The depth of the thinking and discussion on the implementation process of database system development – include but not limit to discussions over the context, business processes, possible analysis and practical insights (if any)		Total: 4
	A	Provide discussions and thinking on the context and business processes, and offer possible analysis and insights to the targeting topic	4
	C	Provide some discussions and thinking on the implementation process	2
	F	Barely discuss on the implementation	0
Reliability	The development procedure is of high reliability		Total: 4
	A	Use theoretical framework to support the modification/implementation of database systems development	4
	C	Use some theory to support the implementation	2
	F	No solid theory foundation of the implementation	0
Writing & format	The readability and language precision of the paper		Total: 3
Sum			Total: 15
